TORONTO, ON, October 13th, 2016 - Peraso Technologies Inc., a leader in Wireless Gigabit (WiGig®) chipsets, is named a Hot Tech Innovator by [ABI Research](#), an honor representing some of the brightest change-makers in the technology marketplace.

[Peraso](#) was selected for their robust, interoperable and commercially-ready multi-gigabit, low latency WiGig chipsets that will launch in business and consumer devices in the coming months. As one of the few WiGig vendors and the only start-up with chipsets ready for the emerging market, Peraso was acknowledged for their WiGig baseband that can accommodate more than one of its RF chips, enabling them to create a robust field of coverage and a higher tolerance to handling radio obstacles.

"Peraso is in a very good position with its WiGig, or 60 GHz Wi-Fi chipsets. Peraso is one of only a few chipset vendors with commercial chips compliant with 802.11ad and ready for the upcoming WiGig certification testing, and with a product breadth supporting mobile devices and PCs, device and PC accessories, and backhaul applications," said Phil Solis, Research Director at ABI Research. "Furthermore, Peraso's experience with millimeter wave radio solutions prepares it for future product lines, including 802.11ay and 5G."

"It's an honor to be recognized by ABI as one the leading innovators in the WiGig ecosystem," states Ron Glibbery, President and CEO of Peraso. "This is a testament not only to the technical excellence of our company, but also to the creativity and ingenuity of our team."

The ABI Research Hot Tech Innovators Report annually identifies 60 young and reinvented companies at the forefront of the next wave of innovation, driving change within their respective areas of expertise. For more information, download ABI Research's Hot Tech Innovators 2016 whitepaper:

###

About Peraso Technologies, Inc.

Peraso is a fabless semiconductor company headquartered in Toronto, Canada. The company is focused on the development of 60 GHz chip sets and solutions compliant with the IEEE 802.11ad specification. 60 GHz has been adopted for interoperability certification by the WiFi Alliance under the WiGig® brand, and WiGig® has seen strong industry endorsement by tech giants such as Samsung, Qualcomm and Intel. For more information, visit www.perasotech.com.
